

Ship Software Faster with AI-Powered Project Management

The first PM platform that doesn't just track work — it does the work. AI code generation, GitHub integration, and smart sprint planning in one workflow.

Raising ■20 Cr (~\$2.5M) Seed Round

THE PROBLEM

Engineering teams lose 23% of their time to tooling overhead

Tool Fragmentation Teams juggle 5-7 tools — Jira, GitHub, Slack, CI/CD — losing hours daily to context switching.	Slow PR Cycles Average PR sits open 4.5 days. Code reviews bottleneck delivery. Junior devs wait days for feedback.	Planning Theater Sprint planning takes hours, estimates are guesswork, retrospectives produce the same action items.
---	---	--

THE SOLUTION

One platform that plans, codes, reviews, and ships

FlowForge replaces the fragmented toolchain with an AI-native workflow automating the entire SDLC — from task creation to merged PR.

Create Task → AI Codes → Human Reviews → AI Responds → Ship It

AI Code Generation Generates production-ready code from task descriptions — including tests, error handling, and PR creation. Supports OpenAI GPT-4o and Anthropic Claude.	Deep GitHub Integration Auto-creates branches and PRs, processes webhooks in real-time, tracks CI/CD status, and syncs bidirectionally with repositories.
AI Sprint Planning Intelligent story point estimation, risk assessment, dependency detection, and automatic retrospective generation from sprint data.	Smart Review Handling AI classifies review comments as code changes vs. discussions, generates contextual responses, and updates code based on feedback.

MARKET OPPORTUNITY

A massive global market — with India as a unique wedge

\$85B Project Mgmt TAM (Global)	\$22B Developer Tools SAM	\$4.5B AI DevTools SOM (Target)	28M+ Professional Developers
---	---	---	--

India Advantage

India has **5.8M+ developers** (2nd largest globally) and 1,600+ GCCs employing 1.9M+ tech professionals. Indian IT services (\$250B+) are under pressure to adopt AI-native tooling. FlowForge is built in India with **3-4x capital efficiency** vs. US peers — the same playbook that built Freshworks (\$12B), Postman (\$5.6B), and Zoho into global SaaS leaders. Land with India's startup ecosystem, expand globally via GitHub's developer network.

TARGET CUSTOMERS

- **Primary — Startups & SMBs:** 5-50 person teams on GitHub. ACV: █50K-3L/yr.
- **Secondary — GCCs & Mid-Market:** 50-500 engineers in 1,600+ GCCs. ACV: █40L-1.5Cr/yr.
- **Expansion — Enterprise / IT Services:** SSO, on-prem, SLAs. ACV: █1.5Cr+/yr.

Why Now? LLMs crossed the production-code-quality threshold in 2025. AI coding tools normalized AI-assisted development. But no tool connects task mgmt → code gen → review → deployment. FlowForge is first to close this loop.

COMPETITIVE LANDSCAPE

Capability	FlowForge	Jira	Linear	Copilot
Task & Sprint Mgmt	✓ Full	✓ Full	✓ Full	✗
AI Code Generation	✓ Full	✗	✗	Inline
Auto PR Creation	✓ Full	✗	✗	✗
AI Review Response	✓ Full	✗	✗	✗
AI Sprint Planning	✓ Full	✗	✗	✗
GitHub Integration	✓ Native	Plugin	✓ Good	✓ Native
Task→Code→P R Loop	✓ E2E	✗	✗	✗
Multi AI Provider	✓ 2	✗	✗	✗

Moat: Data Flywheel — Every AI execution improves code quality, review accuracy, and estimation precision. Compounding data advantages competitors can't replicate.

BUSINESS MODEL

SaaS + Usage-Based AI Upside

FREE	PRO	ENTERPRISE
■0	■999/user/month	Custom
✓ Up to 3 projects ✓ GitHub integration ✓ Basic AI	✓ Unlimited projects ✓ Advanced AI gen ✓ Sprint analytics ✓ Priority support	✓ SSO / SAML ✓ On-premise deploy ✓ Custom integrations ✓ SLA guarantees

Revenue drivers: Seat-based SaaS (predictable MRR) + AI execution credits (usage upside) + Enterprise annual contracts.

TARGET UNIT ECONOMICS

LTV (per seat)	■2.4L (\$2,880)
CAC	■26K (\$320)
LTV:CAC Ratio	9:1
Gross Margin	78%
Net Revenue Retention	125%
Payback Period	4 months

Land & Expand: Free tier drives adoption → teams upgrade as AI proves value → avg expansion 3x in 6 months. PLG keeps CAC low.

TRACTION

Product-First, Capital-Efficient

295+ Source files shipped	50+ Features built
15+ PRs merged	2 AI providers

- Full Kanban board with drag-and-drop, WIP limits, task hierarchy
- End-to-end AI code generation with human-in-the-loop review
- Deep GitHub integration — webhooks, PR management, CI/CD tracking
- AI sprint planning — risk assessment, dependency detection, auto-retros
- Multi-tenant org support with role-based access control
- Open-source community with organic contributors

ROADMAP

- ✓ Phase 1 — Foundation (Done) — Core PM, Kanban, sprints, GitHub, AI code gen pipeline
- Phase 2 — Intelligence (Q2 2026) — Analytics, velocity/burndown charts, time tracking
- Phase 3 — Ecosystem (Q3 2026) — Slack, GitLab, Jira migration, API marketplace
- Phase 4 — Enterprise (Q4 2026) — SSO/SAML, on-premise, SOC 2, audit logs, RBAC

THE ASK

Raising ■20 Crore (~\$2.5M) Seed Round

To accelerate product development, launch publicly, build the go-to-market engine, and capture the AI-native project management category — from India, for the world.

■20 Cr Seed Round (~\$2.5M)	18 mo Runway to Series A	■16 Cr+ ARR Target (2027)
--------------------------------	-----------------------------	------------------------------

USE OF FUNDS

Engineering (50%) Hire 3-4 senior engineers to accelerate roadmap	■10 Cr
AI Infrastructure (20%) API costs, model fine-tuning, execution pipeline	■4 Cr
Go-to-Market (20%) DevRel, content marketing, India GTM	■4 Cr
Operations (10%) Legal, compliance (SOC 2), infrastructure	■2 Cr

KEY MILESTONES

Q2 2026 — Public Beta Open sign-ups, free tier, community building. Target: 500 active teams.
Q3 2026 — Revenue Launch Pro tier, GCC outreach, enterprise pilots. Target: ■40L MRR.
Q4 2026 — Enterprise Ready SOC 2, SSO/SAML, on-premise. Target: 3 enterprise contracts.
2027 — Series A Position ■16 Cr+ ARR, 50+ paying teams, proven unit economics, category leadership.

FlowForge

The future of software delivery starts here.

Not another project management tool — the platform that makes engineering teams superhuman.
